

Purawash™ Impregnated wash mitts. Purawash™ is a soft impregnated disposable wash mitt ideal for a daily wash of (bedridden) patients.

Purawash™ is a soft impregnated disposable wash mitt ideal for a daily wash of (bedridden) patients. The tear proof non-woven flannel gives Purawash™ superior softness and strength. Because Purawash™ is disposed of after each use; it reduces the risk of cross contamination. With Purawash™ there is no need for textile wash mitts, wash lotion and towels. The use of a wash-hand basin, which is a source of bacteria, is superfluous.

The concept:
Purawash™ is packed per 8 mitts in a handy re-sealable pouch, each mitt for a particular part of the body. If desired, Purawash™ can be heated in hot water, on the radiator or in a microwave (30 seconds - 700 watt).

Purawash is:

- neutral
- time saving,
- efficient,
- cost effective,
- a safe alternative to textile wash-mittens,
- impregnated with a lotion containing vitamin E and Aloë Vera.
